LED magnetic track **SMART** lighting system

The magnetic track SMART system consists of intelligent power supply modules, LED luminaires, and accessories for their connection and installation. The output voltage of the power supply modules is 48V DC. It can be controlled via an RF remote control and/or through a smartphone application using Bluetooth. The Lamp Smart Pro application is available for Android and iOS. The luminaires are equipped with a special driver that allows dimming and CCT control.

Professional LED strips

The professional Ultralux® LED strip series is designed for long-duration project applications. This series uses high-quality components: flexible copper PCBs (99.99% Cu) and high-efficiency LED chips with a high colour rendering index (Ra > 80). Double-layer PCBs are used, with copper trace thickness up to 4 oz, depending on the strip's power. To enhance efficiency, current control is applied, with operating voltages of 24V DC and 48V DC. Colour temperature consistency meets SDCM < 3*. For protection, a nano-silicone coating is used for IP54 rating, and extruded silicone for IP67 rating. The standard strip length is 5 m for 24V DC and 10 m for 48V DC.

* Standard Deviation Colour Matching (MacAdam Ellipse).

RF kinetic system

The UltraLux kinetic control system consists of kinetic control switches (KRFSM, KRFS1, KRFS2) and RF receiver units (KRFSC, KRFR1, KRFR2).

There are three types of receivers in the system: a single-channel receiver (KRFR1), a dual-channel receiver (KRFR2), and a single-channel Schuko-type socket (KRFSC). Up to 6 single-channel switches can be paired to one channel, and up to 5 channels can be connected to one single-channel switch. The receiver gets the RF signal from the switch and turns the electrical load on/off.

Advantages: installation without wiring between the switch and the load; creation of two-way (staircase) switching without additional wiring; remote control of electrical appliances; option to program the receiver's initial state after a power outage.

RF wireless kinetic doorbells

RFCDB18 and RFCDB18B are wireless RF doorbells. The button controls the doorbell wirelessly (via RF signal) and does not require a power source (battery) or connecting wires. Buttons can be paired and unpaired – one doorbell can be controlled by several buttons, and one button can control multiple doorbells.

The button has a high degree of protection (IP44), suitable for environments with elevated levels of dust and moisture.

Three operating modes: sound, light, and combined.

Four volume levels.

18 polyphonic melodies.

Long operating range.

Button with name label field.

Two mounting options – using double-sided adhesive tape or mounting accessories.
